### What is this product?

**Type:**

This product is a UCITS Fund.

**Term:**

Open Ended Fund.

**Objectives:**

Alger SICAV - Alger American Asset Growth Fund (the "Fund") is actively managed and seeks long term capital appreciation.

The Fund invests at least two-thirds of its net assets in equities or equity related securities of companies of any size which demonstrate promising growth potential and whose securities are listed or traded on a US stock exchange.

The Fund's benchmark is the S&P 500 Index (the "Benchmark"). The Benchmark is an unmanaged index generally representative of the U.S. stock market without regard to company size. The Fund is actively managed, meaning that it does not intend to replicate the Benchmark but tries to exceed its performance. The Fund is not constrained by the Benchmark. The Benchmark is used for comparison purposes only.

The Fund can invest in financial derivative instruments for hedging purposes and for efficient portfolio management purposes.

**Intended retail investor:**

This product is intended for investors who are prepared to take on a relatively high level of risk of loss to their original capital in order to get a higher potential return, and who plan to stay invested for at least 5 years. It is designed to form part of a portfolio of investments.

### What are the risks and what could I get in return?

#### Risk Indicator

The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level and poor market conditions will likely impact the value of your investment.

Growth stocks may be more sensitive to market, economic and political developments than other stocks, which makes their prices more volatile. The Fund may invest in derivatives which may have a large impact on the Fund's performance.

For other risks materially relevant to the product which are not taken into account in the summary risk indicator, please read the product's Annual Report or Prospectus available at [www.alger.com](http://www.alger.com).

This product does not include any protection from future market performance so you could lose some or all of your investment.

## Performance scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are

illustrations using the worst, average, and best performance of the Fund over the last 10 years.

The stress scenario shows what you might get back in extreme market circumstances.

Recommended Holding Period: 5 years			
Investment: USD 10,000			
Scenarios		If you exit after 1 year	If you exit after 5 years (recommended holding period)
Minimum: There is no minimum guaranteed return if you exit before 5 years			
Stress	What you might get back after costs Average return each year	940 USD -90.57%	880 USD -38.51%
Unfavourable <sup>1</sup>	What you might get back after costs Average return each year	6,300 USD -37.00%	9,960 USD -0.08%
Moderate <sup>2</sup>	What you might get back after costs Average return each year	11,570 USD 15.75%	18,250 USD 12.78%
Favourable <sup>3</sup>	What you might get back after costs Average return each year	16,210 USD 62.12%	29,830 USD 24.43%

<sup>1</sup> This type of scenario occurred for an investment between October 2021 and February 2024.

<sup>2</sup> This type of scenario occurred for an investment between July 2014 and July 2019.

<sup>3</sup> This type of scenario occurred for an investment between October 2016 and October 2021.

## What happens if Alger SICAV is unable to pay out?

You may face a financial loss should the Management Company or the depositary/custodian, The Bank of New York Mellon SA/NV, Luxembourg Branch, default on their obligations.

There is no compensation or guarantee scheme in place which may offset, all or any of, this loss.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on

an example investment amount and different possible investment periods.

We have assumed, in the first year you would get back the amount that you invested (0% annual return). For the other holding period, we have assumed the fund performs as shown in the moderate scenario.

Investment: USD 10,000	If you exit after 1 year	If you exit after 5 years
Total costs	160 USD	1,339 USD
Annual cost impact (*)	1.6%	1.7%

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 14.5% before costs and 12.8% after costs.
